

## Timing Data for Pit Lane

For this event IMSA is providing the Team Data Client software to each Team. This will be the only software used for this event. There will be no Enhanced RMon protocol for 3<sup>rd</sup> party software such as HH Timing or Race Tools.

The latest version of the Team Data Client software can be downloaded by connecting a computer to the pit lane network through an IMSA router using the web browser address of <ftp://timing-data.aks> .

Within Team Data Client please look at the Stints Windows to see drive time information for each driver.

If you have any questions or need an IMSA Router please see Timing on the 3<sup>rd</sup> floor of the tower.
